

Multi Storey Extension to Mid-Western Regional Hospital

This project involved the demolition of the hospital canteen and the construction of a 7 storey extension, and alterations at 1st floor level to an existing ward.

The extension and alterations provide enhanced facilities including a Neurological Centre/Acute Stroke Inpatient Unit, Cystic Fibrosis Inpatient and Outpatient Units and a replacement canteen at ground floor level linked into the existing building. A temporary escape stair was provided to serve the existing 3 storey hospital building linked in at each floor level.
