

Teleflex Medical, International Headquarters, Athlone

Teleflex is a global provider of medical technologies. This project consisted of the construction and fit out of a three-storey medical device building (4,162m²). Internally, the offices were finished to a Grade A specification. The exterior has a modern façade with a soft curvature.

The exterior has a modern façade with a soft curvature on the east elevation. Glazing on the west and south facades allow for natural light to penetrate the office area. The project was divided into two contracts, CAT A (shell and core) and CAT B (fit-out). We were appointed to carry out the works for the full development. We successfully completed this fast track office development on time. The office development consisted of R&D Marketing department, conference rooms, laboratories, comms

room and canteen to the ground floor level. The first floor consisted of a large open plan office space with multiple offices divided with internal screens for finance, HR and IT departments, comms room and tea stations. The second floor consisted of a large command centre, again with multiple offices for QA/RA and global ops department, comms room, tea stations and large open plan space. The accommodation was finished to a Grade A specification.
