

Wexford General Hospital Extension

This project included a 2,200m² extension to the existing emergency department and a 2,400m² extension to the delivery suite/maternity and operating theatre department.

Works to the existing emergency department included the provision of 10 major treatment cubicles, 4 minor treatment cubicles, resuscitation room, isolation / gynaecology / paediatric multi-function rooms, minor ops room and other ancillary accommodation. The main entrance and concourse was extended to form the new access point and focus to the hospital for patients, visitors and staff. The new main entrance and concourse includes a reception / admin / shop / cafe and security services. The Emergency Department building is connected back into the existing hospital on three floor levels.

The extension to the delivery suite / maternity and operating theatre department included 6 new birthing rooms, a new operating theater, reception and recovery places and additional staff changing and storage facilities. The new Delivery Suite & Theatre Building is tied back into the existing hospital with an undercroft access road as part of the structure to facilitate service/delivery yard access.
